## Assignment-4

Roll No. : FWC22036

### Problem Statement:

Slope of a line passing through P(2,3) and intersecting the line  $x+y=7$  at a distance of 4 units from P .

### SOLUTION:

#### Given:

Equation of line is  $x+y=7$

$$P = (2, 3) \quad (1)$$

#### To Find

Slope of the line passing through P(2,3)

#### STEP-1

Let  $\mathbf{A}$  be any point on the line and the coordinates are,

$$\mathbf{A} = \begin{pmatrix} 4 \\ 3 \end{pmatrix} \quad (2)$$

From given, we know that point  $\mathbf{P}$

$$\mathbf{P} = \begin{pmatrix} 2 \\ 3 \end{pmatrix} \quad (3)$$

Let  $\mathbf{m}$  be the directional vector

$$\mathbf{m} = \begin{pmatrix} 1 \\ -1 \end{pmatrix} \quad (4)$$

Given distance from point  $\mathbf{P}$  to the line is 4

#### STEP-2

The distance from a point  $\mathbf{P}$  to the line is given by,

$$d(\lambda) = \|\mathbf{A} + \lambda\mathbf{m} - \mathbf{P}\| \quad (5)$$

Squaring on both the sides

$$d^2(\lambda) = \|\mathbf{A} + \lambda\mathbf{m} - \mathbf{P}\|^2 \quad (6)$$

#### STEP-3

After substituting  $\mathbf{A}$ ,  $\mathbf{P}$  and  $\mathbf{m}$  in the above equation and solving (6) we get

$$\lambda = 1.64, -3.64 \quad (7)$$

Using equation (7) any point on the line

$$\mathbf{x} = \mathbf{A} + \lambda\mathbf{m} \quad (8)$$

substituting  $\mathbf{A}$  and  $\mathbf{m}$  in (8) we get

$$\mathbf{x1} = \begin{pmatrix} 0.36 \\ 6.64 \end{pmatrix} \quad (9)$$

and

$$\mathbf{x2} = \begin{pmatrix} 5.64 \\ 1.36 \end{pmatrix} \quad (10)$$

using (9) and (10) in line equation we get

$$\begin{aligned} 2.21x + y &= 8.66 \\ x + 2.21y &= 7.42 \end{aligned}$$

#### Construction

vertex	coordinates
P	$\begin{pmatrix} 2 \\ 3 \end{pmatrix}$
