Assignment-5

Roll No. : FWC22036

Problem Statement:

Find the equations of circle passing through (-4,3) and touching the lines x+y=2 and x-y=2.

 $\mathbf{m_1} = \begin{pmatrix} 1 \\ -1 \end{pmatrix}$ (11)

SOLUTION:

Given:

Equation of lines

$$\mathbf{m_2} = \begin{pmatrix} -1 \\ -1 \end{pmatrix} \tag{12}$$

 $\mathbf{m_1} - \mathbf{m_2} = \begin{pmatrix} 2 \\ 0 \end{pmatrix}$

The equation of line passing through ${\bf x}$ with normal vector

 $\mathbf{n}^{\top}(\mathbf{X} - \mathbf{x}) = 0$

 $(\mathbf{X} - \mathbf{x}) = \begin{pmatrix} x - 2 \\ y - 0 \end{pmatrix}$

y=0

which means the direction vector on X-axis and hence the

$$\mathbf{n_1}^{\top} \mathbf{x} = \mathbf{c_1} \tag{1}$$

$$\mathbf{n_2}^\top \mathbf{x} = \mathbf{c_2} \tag{2}$$

n is given by

Point on the circle

where

$$\mathbf{P} = \begin{pmatrix} -4\\3 \end{pmatrix} \tag{3}$$

$$\mathbf{n} = \begin{pmatrix} 0 \\ -2 \end{pmatrix} \tag{15}$$

To Find

Equations of circle passing through P and touching the lines

on substituting (16), (15) in (14) we get

where d=r

STEP-1

(4)

(5)

 $\implies \begin{pmatrix} 1 & 1 \\ 1 & -1 \end{pmatrix} \mathbf{x} = \begin{pmatrix} 2 \\ 2 \end{pmatrix}$ (6)

Let d be the distance from centre **O** to line (1)

centre of the circle will also lie on X-axis

The augmented matrix for the above matrix equation is

$$d = \frac{\left|\mathbf{n}^{\top}\mathbf{O} - c\right|}{\|\mathbf{n}\|} \tag{17}$$

 $\begin{pmatrix}
1 & 1 & | & 2 \\
1 & -1 & | & 2
\end{pmatrix}$ $\stackrel{R_2 \leftarrow R_2 - R_1}{\longleftrightarrow} \begin{pmatrix}
1 & 1 & | & 2 \\
0 & -2 & | & 0
\end{pmatrix}$

$$(R_2 \leftarrow R_2 - R_1) \begin{pmatrix} 1 & 1 & 2 \\ 0 & -2 & 0 \end{pmatrix}$$
 (8)

(8)
$$r = \frac{\left|\mathbf{n}^{\top}\mathbf{O} - c\right|}{\|\mathbf{n}\|}$$
(9) Where **n** is normal vector of line (1) given by

 $\mathbf{n} = \begin{pmatrix} 1 \\ 1 \end{pmatrix} and \ c = 2$

 $\stackrel{R_2 \leftarrow R_2/(-2)}{\longleftrightarrow} \begin{pmatrix} 1 & 1 & | & 2 \\ 0 & 1 & | & 0 \end{pmatrix}$

Where \mathbf{n} is normal vector of line (1) given by

 $\xleftarrow{R_1 \leftarrow R_1 - R_2} \begin{pmatrix} 1 & 0 & | & 2 \\ 0 & 1 & | & 0 \end{pmatrix} \implies \mathbf{x} = \begin{pmatrix} 2 \\ 0 \end{pmatrix}$ (10)

Substituting **n**, c and **O** in (18)

STEP-2

Let \mathbf{O} be the centre of the circle.

Angle of Bi-sectors for the given line equations are:

Distance from P to the centre O is given by

$$d = \|\mathbf{P} - \mathbf{O}\| \tag{20}$$

where d=r

Squaring on both sides

$$r^2 = \left\| \mathbf{P} - \mathbf{O} \right\|^2 \tag{21}$$

substituting O and P in (21) compare (18) and (21) we get

$$\mathbf{O} = \begin{pmatrix} -2.65 \\ 0 \end{pmatrix} and \ \mathbf{O_1} = \begin{pmatrix} -17.35 \\ 0 \end{pmatrix}$$
 (22)

From (18) we get the radius as:

$$r = 3.78, 10.66$$

The required equations of the circles are:

$$\mathbf{x}^{\top}\mathbf{V}\mathbf{x} + 2\mathbf{u_1}^{\top}\mathbf{x} + f_1 = 0 \tag{23}$$

$$\mathbf{x}^{\top}\mathbf{V}\mathbf{x} + 2\mathbf{u_2}^{\top}\mathbf{x} + f_2 = 0$$
